MAKE BUSINESS RUN SMOOTHER WITH MICROSOFT 365 ENTERPRISE

Discover the best-in-class triple package with Microsoft 365 Enterprise. Bringing together Office 365 E3 or E5, Windows 10 Pro Security and the best of Enterprise + Mobility, Microsoft 365 helps you to build a successful business by giving you the productivity tools you need, anytime and anywhere.

Not only does it protect your business from every day threats by using in-built advanced security methods via the Windows 10 Pro operating system, it also supports your journey to GDPR compliance with EM+S features such as Azure Information Protection and Microsoft Intune.

PROTECTING COMPANY DATA IS EQUALLY IMPORTANT TO BOTH SMBS AND ENTERPRISES

SMBs and Enterprises are approaching their technology investments in similar ways. When it comes to protecting company data and bolstering cyber security, SMBs often use Enterprise solutions to prevent data loss and identity theft. While your customers are fundamentally different to a smaller business, the software you use needs to retain elite levels of sophistication to stop breaches and mitigate damage.

Research carried out by Forrester suggests that Enterprise businesses are more likely to know or follow their company's data use and handling policy, appearing proactive in the battle against cyber security attacks instead of reactive. With Microsoft 365 Enterprise, you can bolster your security measures with features that protect your business' front door from the get go, ensuring your employees' productivity remains at an all-time high.

SUPPORTING YOUR GDPR COMPLIANCE JOURNEY

Your data compliance journey starts at the front door with the software you choose. Microsoft 365 is a complete solution designed to comply with the General Data Protection Regulation. Features like Data Loss Prevention means you can identify, monitor and automatically protect sensitive information across your business, while Advanced Threat Protection includes safe links, anti-phishing capabilities and spoof intelligence to stop accidental leaks from happening. Plus, you'll also have access to mobile app management capabilities with Microsoft Intune, specifically customised for the Enterprise business model.

FREE UPGRADE TO WINDOWS 10 PRO

While Microsoft 365 Enterprise does not contain Windows 10 Pro as an Operating System, it does include a free upgrade for certain users. If you already have and are using Windows 7 Pro, Windows 8 Pro or Windows 8.1 Pro across your business,
you'll automatically receive a free upgrade to Windows 10 Pro.

Upgrading means you'll get the most out of the advanced and up-to-date security features in Windows 10 Pro, without having the inordinate hassle of moving everything over at a later stage.

On the other hand, if your business PCs already have the Windows 10 Pro OS installed, Microsoft 365 Enterprise will install automatically through Windows AutoPilot mode, freeing up your time so you can focus on your business.
